

IN THE CLAIMS:

Please cancel Claims 1 to 38, 40 to 44 and 60 to 64 without prejudice or disclaimer of the subject matter presented therein and without conceding the correctness of their rejection. Please amend Claims 39 and 54 to 57 and add new Claim 65 as follows.

1. to 38. (Cancelled)

39. (Currently Amended) A ~~data processing~~ reception apparatus,
comprising:

a) reception means for receiving a television signal;

a2
[[a)] b) input means for entering first program information data indicating information relating to a program and second program information data indicating which indicate information relating to said a same program;

c) designation means for designating desired program information from said first program information data and said second program information data entered by said input means;

[[b)] d) integration means for integrating said first program information data and said second program information data entered by said input means, based on the desired program information designated by said designation means; and

[[c)] e) display means for displaying ~~program information relating to~~ said first program information data and said second program information data integrated by said integration means.

40. to 44. (Cancelled)

45. (Original) An apparatus according to claim 39, wherein said second program information data are detailed information data indicating the detailed information of said program.

46. (Original) An apparatus according to claim 45, wherein said second program information data include at least one of a representative scene of said program, a text explaining the outline of said program, name of an acting person, title of a music and a classification of said program.

a2
cont.

47. (Original) An apparatus according to claim 39, further comprising:
instruction means for instructing an integrating operation by said integration means; and

input control means for controlling said input means in such a manner as to enter said second program information data in response to the instruction by said instruction means.

48. (Original) An apparatus according to claim 47, further comprising:
setting means for setting a range of the integrating operation by said integration means;

wherein said input control means is adapted to control input means in such a manner as to enter said second program information data corresponding to the range set by said setting means.

49. (Original) An apparatus according to claim 39, further comprising:
instruction means for instructing an integration operation by said integration means; and

setting means for setting a range of the integrating operation by said integration means;

wherein said integration means is adapted to integrate said first program information data and said second program information data corresponding to the range set by said setting means.

50. (Original) An apparatus according to claim 49, wherein said setting means is adapted to set at least one of a time zone, a channel and a program.

51. (Original) An apparatus according to claim 39, wherein said integration means is adapted to integrate said first program information data and said second program information data in a time zone close to the current time.

52. (Original) An apparatus according to claim 39, wherein said integration means is adapted to integrate said first program information data and said second program information data relating to a currently observed program.

53. (Original) An apparatus according to claim 39, further comprising:
designating means for designating a range of the integrating operation by said integration
means within the information relating to said first program information data and display by
said display means; wherein said integration means is adapted to integrate said first
program information data and said second program information data according to the
designation by said designation means.

54. (Currently Amended) An apparatus according to claim ~~[[53]]~~ 39,
wherein said designation means is adapted to designate at least one of a time zone, a
channel and a program.

A2
Cont.
55. (Currently Amended) An apparatus according to claim ~~[[53]]~~ 54,
wherein said integration means is adapted to integrate said first program information data
and said second program information data, in such a manner as to display program
information integrating said first and second program information data in a display frame
for displaying the information relating to said first program information data and
corresponding to the range designated by said designation means.

56. (Currently Amended) An apparatus according to claim ~~[[53]]~~ 54,
wherein said integration means is adapted to expand a display frame for displaying the
information relating to said first program information data and corresponding to the range
designated by said designation means, and to integrate said first program information data
and said second program information data in such a manner as to display program

information integrating said first and second program information data in said expanded display frame.

57. (Currently Amended) An apparatus according to claim 39, wherein said integration means is adapted to extract, from said second program information data, information for complementing said first program information data, and to integrate said extracted detailed information data with said second program information data.

58. (Original) An apparatus according to claim 39, further comprising:
search condition setting means for setting a search condition; wherein said integration means is adapted to execute search in said second program information data according to the search condition set by said search condition setting means, and to integrate the second program information data of the result of said search with said first program information data.

59. (Original) An apparatus according to claim 58, wherein said search condition includes for example name of an acting person, title of a music, title of program, a classification of program etc.

60. to 64. (Cancelled)

a2
concl.

65. (New) An apparatus according to Claim 39, wherein said first program information data and said second program information data are input by a same broadcast system.
